Shortcuts

Shortcuts are a simple and convenient way to access the control panel, without having to enter the URL in your browser.

CPanel shortcuts can be configured on your desktop or in the bookmarks bar of your browser.

There are two options for links that can be dragged either to your computer's Desktop or to your browser's bookmarks bar:

1. Access your control panel under "Shortcuts"
2. On the next screen, under "How do I get them?":
 - * The first link provides access to the cPanel home page
 - * The second link provides access to the Webmail screen
